Summary

S&OP Manager and Senior Data Scientist with **5 years** owning demand planning and supply chain analytics for a global **\$800M business** across **6,000 SKUs** in the Americas, EU, and APAC. Owns the full monthly S&OP cycle from statistical forecast through executive consensus, presenting supply and demand risk directly to the C-suite. Brings a rare combination of cross-functional process leadership and hands-on technical depth — building the forecasting systems, automated pipelines, and self-service BI dashboards that planners and finance teams rely on every day.

Core Competencies

- **S&OP and Planning:** Demand Forecasting, Constrained and Unconstrained Forecast, Consensus S&OP, NPI and PIPO Management, Inventory Optimization, E&O Management, Global SIOP
- **Data Science and ML:** Time Series Forecasting, Machine Learning, Statistical Modeling, DSX, SO99+
- **Programming and Analytics:** SQL, Python, R, LINGO
- **Visualization and BI:** Power BI, Tableau, Streamlit, Copilot Studio, Advanced Excel
- **ERP and Planning Systems:** D365, SAP, JDA, Oracle, Salesforce
- **Cloud and Data Platforms:** Azure, Snowflake, AWS, Microsoft Graph API, SharePoint
- **Certifications:** Six Sigma Green Belt, PL-300 Power BI, Tableau Desktop, Google Data Analytics

Experience

Dometic Corporation

Chicago, Illinois

S&OP and Demand Planning Manager

Feb 2025 to Present

Selected to lead the S&OP and Demand Planning function while retaining data science scope, overseeing demand planning end-to-end across the Americas, EU, and APAC.

- Run the end-to-end monthly S&OP demand review, bringing Sales, Operations, Finance, and executive leadership to a single consensus forecast and production plan across **6,000 SKUs**.
- Present supply and demand gap analysis, inventory risk, and scenario recommendations to the C-suite each month.
- Led a team of **4 demand planners** through each planning cycle, providing hands-on guidance on forecasting methodology and ensuring consistent planning quality across all product lines.
- Revamped the S&OP process from an informal review into a structured monthly cadence with defined stages, bringing **constrained forecast** as the official planning baseline for the first time and aligning all functions to a single number.
- Formalized the NPI and PIPO visibility workflow by building SharePoint-based item tracking covering intro dates, ramp curves, and end-of-life integration, which reduced forecast error caused by product launches across Americas, EU, and APAC.

Senior Data Scientist, Supply Chain

Jun 2022 to Feb 2025

- Owned data science across forecast, sales, inventory, and backorder domains for an \$800M global business with 6,000 SKUs, helping drive a **12% reduction in supply chain costs** and more than **\$15M in annual revenue growth**.
- Built an AI agent using RAG architecture integrated with Power BI through Copilot Studio, giving teams the ability to ask questions in plain English against live forecast, inventory, and backorder data and cutting ad hoc report turnaround by **40%**.
- Developed ML demand forecasting models using time series, regression, and ensemble methods that improved forecast accuracy by **15%**, supported by automated MAPE and WMAPE exception pipelines with daily bias alerts to planners.
- Built a 25-month forward supply plan engine pulling from D365 and DSX SQL, producing constrained and unconstrained forecasts with current-month proration that feed directly into the monthly S&OP review.
- Created a What-If scenario planning tool in Power BI and Streamlit that lets Sales, Finance, and Operations test demand and supply scenarios in real time, which has consistently shortened the time to reach monthly S&OP consensus.
- Automated six reporting pipelines covering daily forecast emails, item master change alerts, PIPO tracking, and supply date monitoring, eliminating manual work and making it easier to spot and investigate demand shifts quickly.
- Designed Power BI dashboards for forecast performance, inventory health, and KPI tracking that improved decision speed by **25%** across Sales, Supply Chain, and Finance.
- Managed demand planning for 38 new product launches and promotions, finishing with **98% product availability**, a **20% drop in stockouts**, and a **15% cut in excess inventory**.

Delphi TVS

India

Supply Chain Analyst

May 2020 to Dec 2020

- Cut stockouts by **30%** through safety stock analysis and regular inventory level reviews tied to actual demand patterns.
- Reduced delivery costs by **15%** by aligning purchasing decisions more closely with forecast demand.
- Resolved lead time, fill rate, and data quality issues with key suppliers, resulting in a **25% improvement** in overall supplier performance.
- Smoothed inbound receipts at the distribution center to stay within capacity, achieving a **20% reduction** in operating costs.

Education

University of Illinois Chicago

Chicago, Illinois

Master of Science, Industrial Engineering

Jan 2021 to May 2022 | GPA: 4.0

SRM Institute of Science and Technology

India

Bachelor of Science, Mechanical Engineering

Aug 2016 to May 2020 | GPA: 3.86
